## Question of the Month

MARCH 2025

What are the main challenges you face when seeking healthcare services in French?

For the question of the month for March, we wanted to know the main challenges you face when seeking health care services in French.

The results reveal that:

- 100% of respondents find there is a lack of French-speaking health professionals;
- 54.5% face long wait times to access services in French;
- 54.4% have difficulty finding information about available services.

These findings highlight the importance of continuing efforts to improve the availability of French-language health services in the region. The lack of French-speaking human resources, combined with the insufficient availability of clear and accessible information, contributes to a care experience that is often frustrating for Francophone individuals.

Please know that your feedback strengthens our commitment to advocating for concrete solutions to address these challenges and to promote a more inclusive and equitable health care system for all.
